## ABOUT ME

Full Stack Developer with a knack for crafting efficient solutions in Next.js and React.js.Dedicated to continuous learning and staying updated with emerging technologies. Collaborative team or individual player with strong communication skills. Eager to contribute, problem solving expertise and drive innovation in web development projects.

#### **PROJECTS**

#### GreenGrove (A Ecom web application)

- Next.js for seamless front-end/client-side and back-end/server-side performance using MongoDB and Localstorage for a Full Stack web app and Restful API.
- MongoDB for authentication to secure user authentication to ensure data integrity and confidentiality, bolstering trust in GreenGrove's platform.
- Bcrypt hashing and salting for password encryption, cookies and middleware authentication
  to fortify security, protecting user accounts and sensitive data from unauthorized access.
- Nodemailer for email verification, bolstering account authenticity and security
- Shaden to Enhance user experience with a dynamic product showcase Carousel to create an
  eye-catching BestSeller section.
- LocalStorage for a user-friendly cart management system utilizing.
- **GitHub Code** https://github.com/Thanushree2298/greengrove.git
- Demo app https://greengrove-an05u6kjm-thanushree2298s-projects.vercel.app/

#### Snapgram(A social media application)

- React.js for front-end/client-side and React Query(Tanstack Query) for back-end/serverside quick data fetching and seamless user experience, users can easily create and explore posts while enjoying a robust authentication system for a Full Stack web app.
- Appwrite, Zod, Node.js as a back-end/server-side or server-side as a Service(Baas) solution, offering authentication, database, and file storage functionalities.
- Implement a robust authentication system prioritizing security and user privacy.
- Restful API Develop an Explore Page as the homepage for users to discover posts, featuring a section highlighting top creators. Enable users to like and save posts
- Design a Profile Page showcasing liked posts and offering options to edit user profiles.
- Allow users to browse and explore other users' profiles and posts.
- Dropzone for drag-and-drop feature and a user-friendly Create Post Page with seamless file management
- Provide users with Edit Post functionality, allowing them to modify their posts at any time.
- Infinite scroll feature for seamless content browsing, a responsive UI featuring a bottom bar for a mobile app-like experience with seamless navigation.
- $\bullet \quad \textbf{GitHub Code} \ \ \text{https://github.com/Thanushree2298/snapgram.git} \\$
- Demo app https://snapgram-ozdzg7opx-thanushree2298s-projects.vercel.app/

# PriceWise(WebScrapper)

- Next.js for seamless front-end/client-side and back-end/server-side performance and Bright
  Data's webunlocker to create a front-end visually appealing header featuring a carousel
  highlighting key features and benefits for a Full Stack web app.
- Bright Data, Cheerio to implement a search bar enabling users to input Amazon product links for scraping.
- MongoDB to display details of scraped products, providing insights into tracked items.
- Showcase scraped product details including images, titles, pricing, and other relevant information from the original website.
- Restful API for offering a modal for users to provide email addresses and opt-in for tracking.
- Nodemailer to send product alert emails, such as back-in-stock or lowest price notifications, based on user preferences.
- Cron jobs for automated periodic scraping, ensuring data remains up-to-date.
- GitHub Code https://github.com/Thanushree2298/pricewise.git
- Demo app https://pricewise-n553ey1rp-thanushree2298s-projects.vercel.app/
